SUMMARY

I'm a skilled developer specializing in web and frontend technologies, with a focus on data-driven frontend applications that support business-critical processes.

I have worked with React and the wider React ecosystem as the primary frontend technology. I quickly understand complex problems and business processes and am accustomed to working in project teams alongside developers, project managers, and graphic designers. I am a dedicated team member who goes the extra mile to meet project goals and support my colleagues.

In 2022, I made the decision to move into freelancing. Since then, I have worked for clients, such as Jyske Bank, Per Aarsleff and the United Nations.

CAREER AND PROJECTS

Per Aarsleff A/S, *Freelance*

November 2025 - July 2026, Aarhus, Denmark

Development of a project management tool to support entering, organizing and enriching project data for projects in Per Aarsleff Pipe Technologies. The application is built in React and integrated into Microsoft Dynamics.

Azure DevOps

Copilot/Copilot CLI

Fluent UI

Playwright

React

Tanstack Query/Tanstack DB

TypeScript

Vite

United Nations (UNOPS), *Contractor*

April 2025 - November 2025, Remote

Implement a redesign of the UNOPS data website that I previously developed in 2024.

Copilot/Copilot CLI

Craft CMS

Echarts

Flowbite React

Github

Mapbox

Playwright

React

Tanstack Query

Tanstack Router

Tailwind

TypeScript

Vite

United Nations (UNOPS), Contractor

February 2024 - November 2024, Remote

Development of a website for UNOPS to showcase their projects around the world.

Craft CMS

Github

Mapbox

Playwright

React

Tanstack Query

Tailwind

TypeScript

Vite

Per Aarsleff A/S, Freelance

October 2023 - April 2024, Aarhus, Denmark

Development of a project management tool to support entering, organizing and enriching project data for projects in Per Aarsleff Pipe Technologies. The application is done in React and integrated into Microsoft Dynamics.

Azure DevOps

CSS

Fluent UI

Konva

React

react-query

TypeScript

Vite

Mindworking A/S, Freelance

April 2023 - July 2023, Aarhus, Denmark

Development of the frontend, for an automated anti money laundering check of real estate buyers and sellers.

Upgraded npm versions of a large code base that had fallen significantly behind recommended versions.

CSS

Git/Gitlab CI/CD

GraphQL

Material UI

React

Relay

TypeScript

Jyske Bank A/S, Freelance

September 2022 - March 2023, Silkeborg, Denmark

Part of an internal frontend development team responsible for building a new website for Jyske Bank private banking customers. The application is a Next.js application integrated with the bank's Umbraco Headless CMS. The task involved developing a suite of reusable React components to use on the website.

CSS

Figma

Git/Github

Next.js

React

Tailwind

TypeScript

Umbraco

Mindworking A/S, Senior Frontend Developer

August 2017 - August 2022, Aarhus, Denmark

Part of a frontend team that built a large web application, aimed at disrupting the real estate case management software industry and digitalizing the way realtors work internally and with their customers. The project includes calendar and task management, a messenger-style chat system for communicating with clients, a document management system, loan calculation, an interface with banks, lenders, and public real estate data, and much more. The product has gone from a newcomer with 0% market share, to a dominant market leader in less than 3 years.

Android Studio

CodeMagic CI/CD

Git/Gitlab CI/CD

Google Maps API

GraphQL

HTML

JavaScript

Material UI

MobX

React

React Native

Relay

TypeScript

XCode

SOS International, Frontend Developer

March 2017 - July 2017, Risskov, Denmark

Responsible for developing a web application for searching for approved providers to help motorists, who need roadside assistance.

CSS

Git

Google Maps API

HTML

JavaScript

React

Joblicate, Senior Frontend Developer

October 2016 - March 2017, Aarhus, Denmark

Part of a small startup company of 4 developers, aimed at creating an online platform for job applicants to apply to jobs, by answering three to five predefined employer questions, using the camera on their cell phone and an app created by Joblicate. Employers could then evaluate each applicant's video answer, from the platform and pick out suitable candidates. I have worked as a frontend developer, on the web platform registration module and question setup module in React. The company was sold to a big Danish job board, 6 months after he started at the company.

CSS

JavaScript

React

Redux

Sass

SYMFONI, Senior consultant

May 2010 - October 2016, Aarhus, Denmark

I worked as a senior consultant, at a development and consulting firm, with responsibility for his own customer portfolio. Here are some examples of projects he worked on during that time:

Production planning application for Per Aarsleff A/S:

Business-critical web application to assist Per Aarsleff Pipe Technologies with project management, production planning, calculation, estimation of costs, workflow, and documentation in their pipe renovation business unit. The application was used by all

employees in Per Aarsleff Pipe Technologies offices, as well as by construction workers in the field.

CSS

HTML

JavaScript

Lotus Domino

Sencha Ext JS

SharePoint

Blog site for Grundfos CEO Mads Nipper

From 2010 to 2016 Christian would often work once a week onsite at Grundfos, to help out on different projects, and during that time he developed a blog site, that was integrated into the Grundfos intranet, where the Grundfos CEO could blog about different topics and employees could interact with comments and questions. The blog integrated with the Yammer account of the CEO.

CSS

HTML

JavaScript

Lotus Domino

Sencha Ext JS

ISO quality assurance application for public regions in Denmark

Part of a team of four developers who worked on a web application for the hospitals in two of the largest regions in Denmark, where their procedures, instructions and policies are maintained and deviations are registered. The solution includes controlling read and write access to documents, tracking who has read what material, and advanced search interfaces. All employees have access to these systems, which are better known as "VIP" and "e-dok" in the health sector.

CSS

HTML

JavaScript

Lotus Domino

Sencha Ext JS

ipsh!/The Marketing Arm, Omnicom, Web Application Engineer

February 2006 - March 2009, San Francisco, USA

While working at ipsh!, a marketing agency specializing in mobile marketing, like SMS promotions, mobile coupons, wallpapers, ringtones, interactive voice responses. He developed a platform where campaigns could be set up by project managers, without any coding, greatly reducing the time and cost to market. In 2007 the application was used to set up a Pizza Hut campaign that ran during the NFL Super Bowl.

CSS

HTML

JavaScript

jQuery

Lotus Domino

LN Pro ApS, IBM Notes Domino consultant

November 1998 - February 2006, Risskov/San Francisco, USA

Consultant at an IBM Business Partner, where his responsibilities included development and implementation of applications for the web and the Lotus Notes client. He was responsible for his own customer portfolio. From May 2004 I moved to San Francisco and took care of his customers from there until 2006.
